2016 Surface Design Guide

Each year, Surface & Panel magazine asks the industry's leading decorative surfacing companies to share their latest designs and material advances. The resulting Surface Design Guide is a showcase of the trends and technologies that are shaping the marketplace. Beyond beautiful, this guide is intended to inspire specifiers and fabricators alike to understand what resources are available to create the best possible solutions.

Chemetal: 24 metal designs introduced

Chemetal introduces 24 new designs for 2015, the company's largest introduction in recent memory. These latest designs span the breadth of Chemetal's product line, with new designs in almost every product category. The new additions include aged subway tile patinas, glowing mother of pearl-esque aluminums, richly textured HPL metal laminates, and aged brass, copper and steel Architectural Metals in easy to fabricate aluminum.

Chemetal's new designs are available in standard sheet sizes – 4' x 8' and 4' x 10', as well as some 2' x 8' sizes. Many contribute to LEED with up to 85 percent recycled content.
