ALU BY CHEMETAL

▲ Chemetal's ALU provided the ideal solution for the interior workstations at the New Balance headquarters in Boston, designed by Elkus Manfredi Architects. The firm preferred a custom ALU design based on the ALU Medium offerings. The cut-to-size pieces are installed along the major circulation paths throughout the office on Allsteel workstation panels in lieu of panel fabric.

▲ After seeing a promotional display of ALU, Jofco requested the surface for its NeoCon showroom at the Merchandise Mart. The company was looking for a darker material, and found what it was looking for from Chemetal just a month before the show. It was ordered and installed in time for the event.

► LinkedIn's Toronto location used Factory 349 from Chemetal's ALU line on the walls of designated parts of the office, including creative zones, collaboration spaces, and some more traditional working environments, like the area with desks pictured here. Designed by IA Architects, Chemetal was an appropriate solution in this workspace that has a modern flair.

Chemetal offers an impressive collection of more than 200 metal and laminate designs for vertical and light-duty horizontal use in commercial and residential interiors. The company's range of offerings includes brushed aluminums, oxidized brass and copper designs, HPL metal laminates, tinted metals, perforated patterns, and more. Here, i+s has curated a sampling of projects in which Chemetal's ALU product was specifically picked for the job at hand, whether for a relaxed office area, workstations with desks and partitions, or even a NeoCon showroom. chemetal.com
